Global Warming - Help stop it!

"Climate Change" means our Earth's weather is changing and it is harmful to the planet.

What is Global Warming (Climate Change) All About?

[Spanish Translation](#)

You've been hearing about global warming and some of what you are hearing can sound frightening. It IS a very serious situation, but there is **HOPE** because there is much we can all do help slow this warming process.

Global warming is about the average temperature of the Earth's atmosphere (air) warming up. The gases in the atmosphere that prevent heat from leaving the planet act like a greenhouse around the planet. We need some of these greenhouse gases or we would freeze. But now, sadly, we have too much carbon dioxide, methane and other gases that are holding in too much heat and that's making the Earth get warmer. The weather is changing.

Scientists have been studying climate change for years. They have discovered that some things people do in everyday life create much more gas than needed in Earth's atmosphere. One big cause of this is burning oil, gas, and coal for energy for our cars, our homes and industry. This puts too much greenhouse gas in our atmosphere. We **CAN** do something to cut back on these gases.

Is a Climate that is Changing a Bad Thing?

???' Yes! Learn Why.

The balance of nature means each thing in nature depends on the other. When the Earth heats up this balance is upset. Things can go wrong. For example, global warming is slowly melting the ice at the poles. That can cause the oceans to rise all over the world. Also, it melts the sea ice that our polar bears need for hunting for food. Scientists also believe climate change is causing more extremes of hot and cold. This can harm the plants and animals of the Earth and it may mean more extreme storms? Check out The KSE Cool Earth Team below to learn how you can help. Print out your your Cool Earth Team [certificate](#). The take some action steps below or email your ideas to KSE@kidsforsavingearth.org

Join the Kids for Saving Earth "Cool Earth Team"

 You can really help by using less energy in your own home, school or church and less gas in your family car. Turn down your heat, turn off lights and electronics. Walk and car pool more. Also recycling uses less energy

 Forests soak up some of the greenhouse gases that warm up our Earth. We need more forests, not fewer. So plant more trees! Take photos of you and your group planting trees. [Email us photos](#) and the number of trees you planted. We'll put you on our web site.

 Learn about renewable energy such as [wind power](#) and [sun power](#). Decide what you think is best for your neighborhood.

 Earn money to help your parents buy LED light bulbs. They last 25 times longer and save 75% of energy compared to incandescent light bulbs.

 Send letters, emails, and drawings to [government](#) and industry leaders. Tell them to join the KSE Cool Earth

 Do a report on a Hybrid or Electric car and then draw a picture of it. Next, [email it to us!](#)

 A good event to have at school or church is a *Fill Up Your Car Tires Day*. Properly inflated tires on your family car will use less gas. You can borrow some air compressors and learn how to work them.

 [Order](#) the [Climate Change Poster](#) and place it on your school wall or anywhere you can think of to spread the word about global warming. (global climate change.)

 Write a poem about global warming. Read it to your family and friends and then send it to your Senators.
