

Make Laws to Protect our Earth's Waters

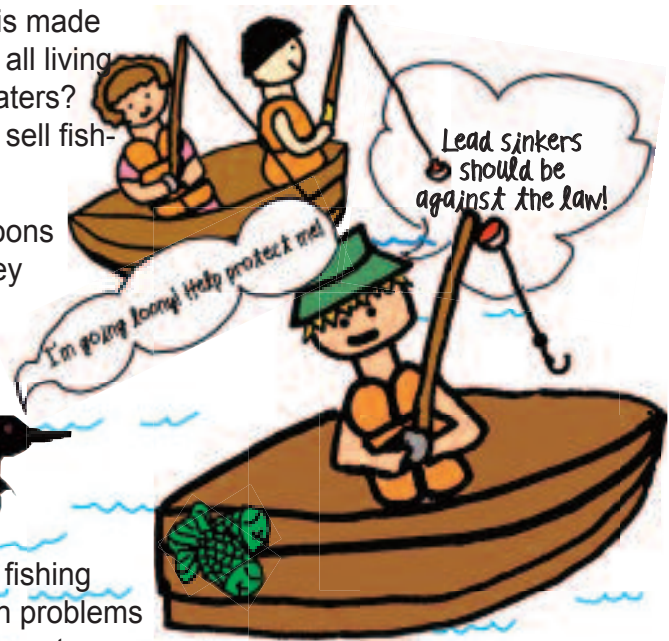

Do you know that some fishing gear that we all use is made with lead. Lead is very toxic material that can make all living creatures sick. Why would we put it in our Earth's waters? Please help us change the laws to make it illegal to sell fishing gear like sinkers that contain lead.

1. Lead sinkers poison waterfowl and birds like loons and eagles because they eat them thinking they are food or pebbles. One sinker can kill a loon.

2. Lead compounds may slowly break down under certain conditions and enter the water and soil becoming an environmental health threat

3. Lead dust from handling sinkers and other lead fishing gear can be inhaled and can cause major health problems especially in children,. The dust also goes into the water.
