

So what will you do  
about dangerous ....

# Toxics in Your Home?

(and environment)

Dear Kids, Parents and Instructors,  
This is a project you should do together.

Your home should be the safest place you can be! However, there are often way too many chemicals in homes that aren't so good for you. Scientists have discovered that there are some that can make kids and adults sick.

So we are on a mission to get them out of our homes. And here is how:

1. With your parents, take a tour of your home to decide what might be toxic. Here is a KSE link that will help you take the tour. [Become an Earth Inspector](#)
2. Discover what chemicals you are using might not be safe and learn which ones are safer. [Here](#)
3. Order the email version of [EWG's Guide to Healthy Cleaning](#)
4. Check out all KSE's education projects about toxics in our environment: [So What's a Toxic Waste Site](#); [Healthy Cleaning Week](#); [Children's Health and the Environment](#); [Honeybees](#); [Healthy Schools](#)

This is  
some  
scary  
stuff!

There's lots  
of good  
cleaning  
supplies!
